Hardware & Software Troubleshooting / Operating System Deployment (Windows & Linux) / Network Configuration & Protocols / System Hardening & Optimization / Device Diagnostics & Maintenance / Virtualization & Cloud Basics / Identity & Access Management (IAM) / IT Operational Procedures & Documentation

ABOUT ME

Versatile IT Support Professional with a lifelong passion for technology and deep technical competence built on hands-on device tinkering and systems management since grade school. Skilled in comprehensive hardware and software troubleshooting, operating system deployment, and network configuration. Demonstrated ability to apply foundational CompTIA A+ and Security+ principles, bridging everyday technical support with robust system hardening and data security. Focused on maximizing system performance, resolving complex user issues efficiently, and ensuring operational uptime. Capable of delivering exceptional, security-conscious support in both solo and collaborative environments.

EDUCATION

De La Salle University | 2021-2027

B.S. Computer Science, Major in Network and Information Security

My undergraduate studies in network and information security have provided a comprehensive foundation in modern IT infrastructure, fully aligned with the core domains of both CompTIA A+ and Security+. I have achieved deep competency in hardware configuration, cross-platform operating system deployment, and network protocols, developing a strategic understanding of how reliable, secure systems underpin organizational operations. This academic background is reinforced by a lifelong passion for technology, cultivated through years of self-directed system diagnostics, performance optimization, and hardware modifications on personal computing devices for a long time. I have gained hands-on proficiency in managing diverse computing environments, utilizing essential diagnostic tools for hardware, software, and network troubleshooting. These practical applications have sharpened my analytical problem-solving and technical investigative skills, allowing me to isolate root causes and implement efficient, security-conscious IT solutions. Furthermore, I excel in both individual and collaborative settings, having successfully partnered with peers in complex network infrastructure labs and technical support simulations, while consistently managing independent IT projects.
